(54) Title: METHOD AND DEVICE FOR LINKING MULTIMEDIA DATA

(57) Abstract: It is desired to link photo data and video data taken by a digital camcorder (200). Therefore, there is provided a device and method for linking multimedia data, wherein linking information is formed (209) on the basis of first and/or second multimedia data. The linking information is stored (210) on a recording medium (202) together with the first multimedia data (201). The second multimedia data may be stored (206) together with respective linking information (211) to the first multimedia data on a second recording medium (207). Thus, a camera-man while recording is able to set up logo or index pictures for a video film.
